3. Overview of Qatar

Economic Fundamentals

- It is widely confirmed that the economic impact of the blockage has all but faded with the nominal GDP rising 9.4% in Q4, 2017, as per MDPS recent figures. The IMF has also expressed a similar view on the issue.
- Qatari Government's strong fiscal and economic policy direction is also helping the economy to grow at the fastest rate among the GCC countries in spite of the crisis. For example, the estimated expenditure for 2017 was at QAR 198.4 billion and QAR 93.2 billion (or 47.0%) of that is allocated for the major projects (2018 State will also be tabled soon by mid-December).
- So, the key driver for growth in Qatar is infrastructure spending, while oil prices have also significantly improved.
- Qatar is also the largest exporter of LNG with a global market share of 31%.
- Qatar has also been enjoying the top rank since 2011, in terms of its per capita income—i.e., Qatar is the richest country in the world.

Rating

- The country also still enjoys one of the highest credit ratings in the world—Aa3/AA-/AA- by the Moody's, S&P and Fitch because of the government's sound macroeconomic policy and resilience.

Outlook

- The outlook for the Qatari economy has improved, as the oil prices have picked up—e.g., Qatar's December trade surplus jumped 39.1%, y/y, according to recent data. Qatar's money supply (M2) also increased in December by 21.3%, y/y, which is a sign of liquidity in the country improving.
- The country's budget is now also in surplus and will remain so, going forward, according to the recent figures from the Ministry of Finance
